

We help organisations get value from SharePoint®

OBS SUCCESS STORY

Yallourn Energy

Overview

Power Company Yallourn Energy wanted to create a “Yahoo like” portal solution to allow employees to connect with the entire scope of the business from employees, to knowledge to real time business information.

The company portal “Finger Tips” now powers the business and delivers employees the experience of instantly connecting to the Yallourn world from anywhere on the planet.

Challenge

Yallourn Energy is one of the Australia’s biggest power companies. It supplies 22% of Victoria’s power and 8% of the National Electricity Market, which takes in Australia’s five most populated states. Yallourn employs approximately 300 people across two Melbourne sites and the LaTrobe Valley.

OBS were engaged as the award winning OBS solution ‘Knowledge Central’ was exactly what Yallourn Energy required and Yallourn Energy were satisfied that OBS could meet tight deadlines for rapid deployment that Yallourn Energy had set.

Yallourn Energy has been able to align IT to the business plan and increase the value of its existing Microsoft IT investment. Yallourn Energy now has ‘Finger Tips’ a SharePoint portal that is the centre of their knowledge management strategy. Finger Tips also met Yallourn Energy’s requirement for computing anywhere, anytime on any device and empowered employees working in non-office environments such as mines or power stations where PC’s are not readily accessible. Employees anywhere can share their intellectual property or access vital business data. Finger Tips includes business intelligence and reporting functions that extract data from 20 different sources. Yallourn Energy has become an information driven company.

Yallourn Energy is now part of TRUenergy
