

# OBS Success Story

## Austereo

### 'Basestation' – The company portal for the national broadcaster Austereo

#### Overview

Austereo the largest broadcaster in Australia sought a foundation of technology to support their business needs. It wanted to connect its people and streamline its information management.

The SharePoint portal "Basestation" now embodies these changes and has helped Austereo move forward and meet their business needs.

#### More information....

Austereo runs two national radio networks across Australia – TODAY and Triple M which run across all major cities and two major regional cities. Listed on the Australian stock exchange Austereo have exported key competitive advantages to offshore markets including Malaysia, Greece and the UK.

Austereo were interested in Sharepoint technologies for their intranet and sought OBS to work through moving to this technology efficiently and effectively from a static HTML environment. OBS worked to meet Austereo's key business goals, minimise risk and increase user acceptance by working closely with Austereo's internal IT Team and understanding the displaced working environment of multiple radio network locations. Basestation has helped Austereo achieve 'Any time, any where' access to corporate information including Austereo Policies and Radio codes, department information and Outlook Webmail. BaseStation has given users easy search functionality. Search is available across both the SharePoint portal Basestation and the Windows SharePoint Services sites that have been rolled out across Austereo sites. Information is now available at Austereo's fingertips.
