

Podcasting provides a new medium to record and distribute audio information via the internet and intranet. Many organisations are now using Podcast technology to provide company news, improve training and increase employee participation.

Nintex Podcast Server provides organizations with a centralized, easy to manage solution to create, manage and distribute podcasts. Built on Microsoft SharePoint technology users create podcasts via an online easy-to-use interface.

Organizations utilize Podcasting as a new way to improve communication, distribute information and record meetings and events.

Tight integration with SharePoint 2007  
(Silverlight interface pictured)

Sort and organise your podcasts like a SharePoint library

Record your podcast through a browser
